Paper 4 Further Probability & Statistics

October/November 2024

1 hour 30 minutes

You must answer on the question paper.

You will need: List of formulae (MF19)

INSTRUCTIONS

- Answer **all** questions.
- Use a black or dark blue pen. You may use an HB pencil for any diagrams or graphs.
- Write your name, centre number and candidate number in the boxes at the top of the page.
- Write your answer to each question in the space provided.
- Do **not** use an erasable pen or correction fluid.
- Do **not** write on any bar codes.
- If additional space is needed, you should use the lined page at the end of this booklet; the question number or numbers must be clearly shown.
- You should use a calculator where appropriate.
- You must show all necessary working clearly; no marks will be given for unsupported answers from a calculator.
- Give non-exact numerical answers correct to 3 significant figures, or 1 decimal place for angles in degrees, unless a different level of accuracy is specified in the question.

INFORMATION

- The total mark for this paper is 50.
- The number of marks for each question or part question is shown in brackets [].

This document has **16** pages. Any blank pages are indicated.

- 3.5 4.2 3.8 5.2 2.9 3.7 4.1 3.2

Find a 90% confidence interval for the population mean length of leaves of this type of plant. [4]

$$G_X(t) = \frac{1}{5} + pt + qt^2,$$

(a) Given that $E(X) = 1.1$, find the numerical value of $\text{Var}(X)$.

The image features a large, light blue watermark reading "4U Admission" diagonally across the page. In the top left corner, there is a partial view of the University of Utah logo, which includes a red shield with a white border and the text "SINCE 2020" in white. The background is white with horizontal dotted lines.

(b) Find the probability generating function of Z . [2]

(c) Find $P(Z > 2)$. [1]

.....

.....

.....

.....

.....

(d) State the most probable value of Z . [1]

[illegible]

3 Rosie sows 5 seeds in each of 150 plant pots. The number of seeds that germinate is recorded for each pot. The results are summarised in the following table.

Number of seeds that germinate	0	1	2	3	4	5
Number of pots	12	40	43	35	16	4

Rosie suggests that the number of seeds that germinate follows the binomial distribution $B(5, p)$.

- (a) Use Rosie's results to show that $p = 0.42$. [1]

- (b) Carry out a goodness of fit test, at the 10% significance level, to test whether the distribution $B(5, 0.42)$ is a good fit for the data. [9]
