CHEMISTRY **9701/51**

Paper 5 Planning, Analysis and Evaluation **October/November 2024**

1 hour 15 minutes

You must answer on the question paper.

No additional materials are needed.

INSTRUCTIONS

- Answer **all** questions.
- Use a black or dark blue pen. You may use an HB pencil for any diagrams or graphs.
- Write your name, centre number and candidate number in the boxes at the top of the page.
- Write your answer to each question in the space provided.
- Do **not** use an erasable pen or correction fluid.
- Do **not** write on any bar codes.
- You may use a calculator.
- You should show all your working and use appropriate units.

INFORMATION

- The total mark for this paper is 30.
- The number of marks for each question or part question is shown in brackets [ ].
- The Periodic Table is printed in the question paper.
- Important values, constants and standards are printed in the question paper.

This document has **16** pages. Any blank pages are indicated.

[Turn over

1 A student uses the following method to determine the percentage by mass of the painkiller aspirin, $C_9H_8O_4(s)$, in some tablets.

step 1 Grind five tablets into a powder.

step 2 Use a weighing boat to accurately weigh by difference approximately 0.4 g of powdered tablets into a pear-shaped flask containing anti-bumping granules.

step 3 Add 25 cm^3 of aqueous 1 mol dm^{-3} sodium hydroxide, NaOH(aq), to the pear-shaped flask, forming mixture **A**.

step 4 Reflux mixture **A** for 20 minutes.

step 5 Allow mixture **A** to cool and then filter into a small beaker. Label the filtrate solution **B**.

step 6 Add 30 cm^3 of alkaline aqueous iodine to solution **B** and leave to stand for 1 hour. A precipitate, **C**, $(C_6H_2I_2O)_2(s)$, will form.

step 7 Filter the resulting mixture under reduced pressure. Wash the residue, **C**, with a small volume of cold distilled water.

step 8 Allow solid **C** to dry.

step 9 Weigh solid **C** and record its mass.

Alkaline aqueous iodine is irritating to the skin and eyes.

(a) Identify an appropriate precaution, other than eye protection and a lab coat, that the student should take when using alkaline aqueous iodine.

.....

..... [1]

(b) Describe how the student should carry out **step 2**. Include a results table, with appropriate headings, for the student to fill in.

.....

.....

.....

[2]

(c) Complete Fig. 1.1 to show how **step 4** is carried out in the laboratory.

Label your diagram fully.

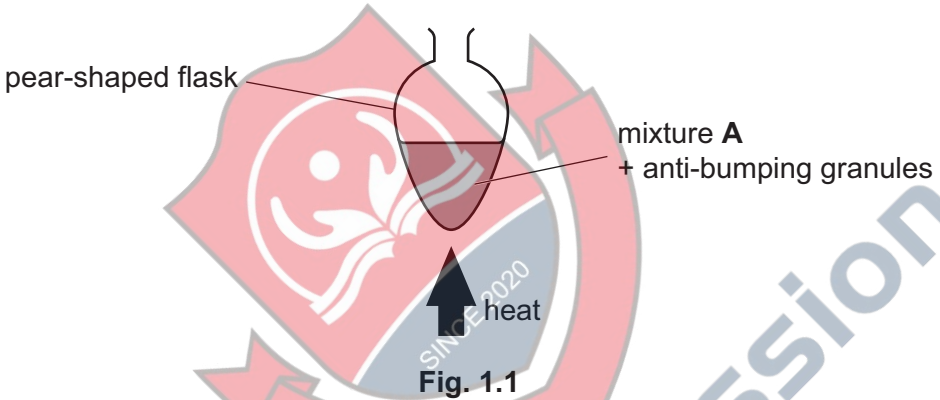

Fig. 1.1

[2]

(d) **(i)** The student uses a measuring cylinder to measure the volume of alkaline aqueous iodine in **step 6**. Suggest why this is a suitable piece of apparatus to use.

.....

..... [1]

(ii) Suggest why the student leaves the mixture to stand for 1 hour in **step 6**.

.....

..... [1]

(iii) Explain why the residue is washed in **step 7**.

.....

..... [1]

(iv) Explain why hot distilled water is **not** used in **step 7**.

.....

..... [1]

(e) The equation for the reaction between aspirin, $C_9H_8O_4(s)$, and NaOH(aq), which takes place in **step 4**, is shown.

$$C_9H_8O_4(s) + 2NaOH(aq) \rightarrow C_7H_5O_3^-Na^+(aq) + C_2H_3O_2^-Na^+(aq) + H_2O(l)$$

The equation for the reaction in which solid **C**, $(C_6H_2I_2O)_2(s)$, is formed in **step 6** is shown.

$$2C_7H_5O_3^-Na^+(aq) + 6I_2(aq) + 8OH^-(aq) \rightarrow (C_6H_2I_2O)_2(s) + 8I^-(aq) + 2NaHCO_3(aq) + 6H_2O(l)$$

The student's results are shown in Table 1.1.

Table 1.1

mass of powdered tablets added to the pear-shaped flask in **step 2**	0.409 g
mass of dry $(C_6H_2I_2O)_2(s)$ recorded in **step 9**	0.764 g

(i) Calculate the amount, in mol, of $(C_6H_2I_2O)_2(s)$ collected in **step 9**.

[M_r: $(C_6H_2I_2O)_2$, 687.6]

amount of $(C_6H_2I_2O)_2$ ..... mol [1]

(ii) Use your answer to **(i)** to calculate the mass, in g, of $C_9H_8O_4(s)$ in the powdered tablets added to the flask in **step 2**.

mass of $C_9H_8O_4(s)$ ..... g [1]

(iii) Use your answer to **(ii)** to calculate the percentage by mass of aspirin, $C_9H_8O_4(s)$, in the tablets.

If you were unable to obtain an answer to **(ii)** you may use 0.374 g for the mass of $C_9H_8O_4(s)$. This is **not** the correct value.

percentage by mass $C_9H_8O_4(s)$ in the tablets ..... [1]

(f) Another student follows the same method but does not allow solid **C** to dry completely in **step 8**.

State and explain the effect that this has on the calculated percentage by mass of aspirin, $C_9H_8O_4(s)$, in the tablets.

.....

.....

..... [1]

[Total: 13]

2 Crystal violet, $C_{25}H_{30}N_3Cl$(s), is a purple dye.

Some light is absorbed when it passes through $C_{25}H_{30}N_3Cl$(aq).

Absorbance is the proportion of light absorbed at a particular wavelength. This is measured using a colorimeter.

A graph of absorbance against wavelength for $C_{25}H_{30}N_3Cl$(aq) is shown in Fig. 2.1.

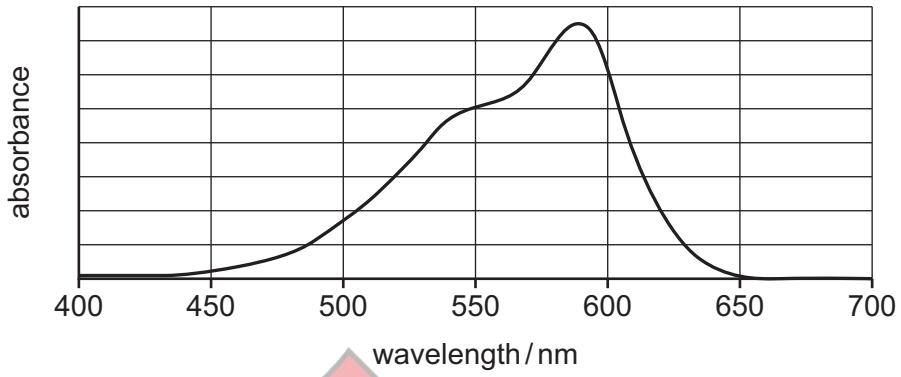

Fig. 2.1

A student investigates how to determine the concentration of aqueous crystal violet, $C_{25}H_{30}N_3Cl$(aq), using colorimetry.

(a) Suggest the best wavelength of light to use in the colorimeter when measuring the concentration of $C_{25}H_{30}N_3Cl$(aq).

wavelength = ... nm [1]

(b) Solution **D** is 500.0 cm^3 of 2.50×10^{-2} mol dm^{-3} $C_{25}H_{30}N_3Cl$(aq).

(i) Calculate the mass of $C_{25}H_{30}N_3Cl$(s) needed to prepare solution **D**.

Give your answer to **three significant figures**.

[M_r: $C_{25}H_{30}N_3Cl$(s), 407.5]

mass of $C_{25}H_{30}N_3Cl$(s) = ... g [1]

(ii) The student is given a small beaker containing the mass of $C_{25}H_{30}N_3Cl$(s) calculated in **(i)**.

Describe how the student should prepare 500.0 cm^3 of solution **D**.

Include the name and capacity of the key apparatus which should be used and describe how the student should ensure the volume is exactly 500.0 cm^3.

.....

.....

.....

.....

.....

.....

..... [3]

(c) A small sample of solution **D** was diluted to form solution **E**, 2.50×10^{-4} mol dm^{-3} $C_{25}H_{30}N_3C\ell$(aq).

The student prepares solutions 2 to 6 as shown in Table 2.1.

The total volume needed for each of solutions 2 to 6 is 20.00 cm^3.

Each solution is placed into a colorimeter and the absorbance is measured.

(i) Complete Table 2.1 to show the volumes of solution **E** and distilled water needed to prepare each of the solutions from 2 to 6. Give all volumes to **two** decimal places.

Table 2.1

solution	volume of 2.50×10^{-4} mol dm^{-3} $C_{25}H_{30}N_3C\ell$(aq) (solution **E**) / cm^3	volume of distilled water / cm^3	[$C_{25}H_{30}N_3C\ell$(aq)] / mol dm^{-3}	absorbance
1	0.00	20.00	0.00	0.000
2			0.50×10^{-4}	0.191
3			1.00×10^{-4}	0.270
4			1.50×10^{-4}	0.545
5			2.00×10^{-4}	0.711
6			2.50×10^{-4}	0.860

[1]

(ii) Identify the dependent variable.

..... [1]

(d) (i) Plot a graph of absorbance against $[C_{25}H_{30}N_3Cl(aq)]$ on the grid in Fig. 2.2.

Use a cross (×) to plot each data point.

Draw a straight line of best fit.

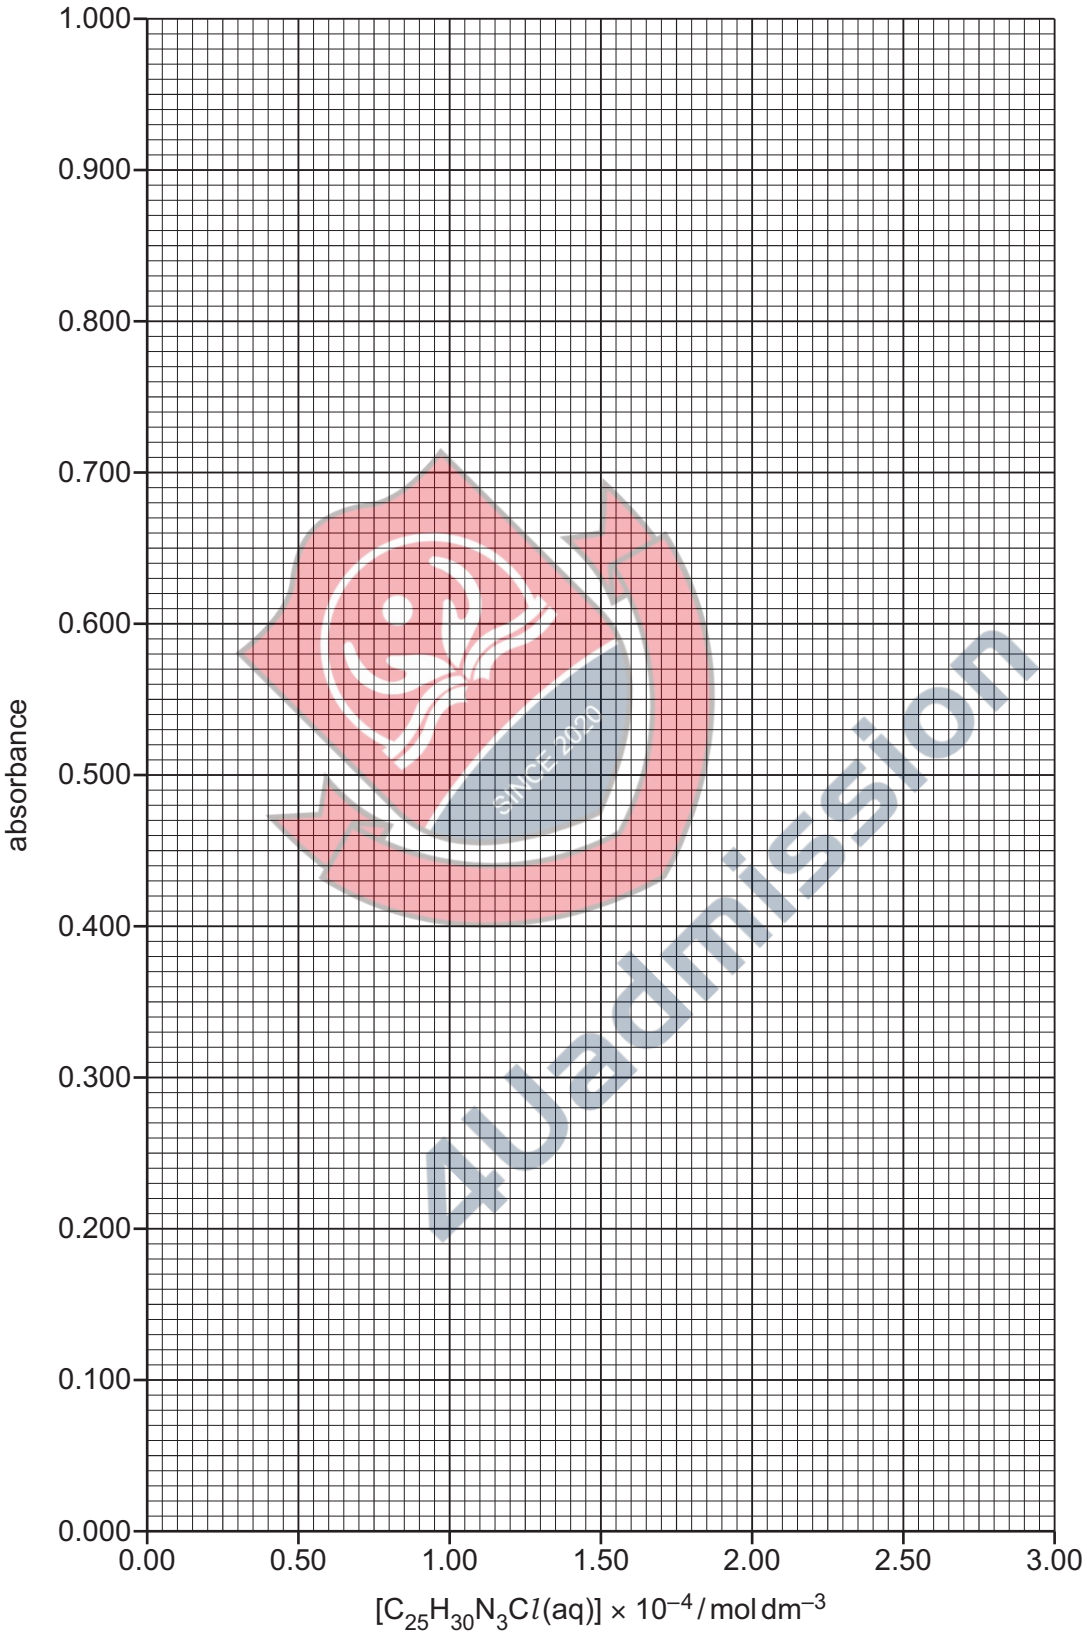

Fig. 2.2

[2]

(ii) Circle the point on the graph you consider to be most anomalous.

Suggest **one** reason why this anomaly may have occurred during this experimental procedure.

Assume no error was made in the measurement of absorbance.

.....

..... [2]

(iii) State the relationship between $[C_{25}H_{30}N_3C\ell(aq)]$ and absorbance.

..... [1]

(iv) Suggest how the student could improve the reliability of the data obtained in the experiment in **(c)**.

.....

..... [1]

Question 2 continues on the next page.

(e) The student carries out a further experiment to examine the kinetics of the reaction between crystal violet, $C_{25}H_{30}N_3Cl(aq)$, and aqueous sodium hydroxide, NaOH(aq).

$$C_{25}H_{30}N_3Cl(aq) + OH^-(aq) \rightarrow C_{25}H_{30}N_3OH(aq) + Cl^-(aq)$$

The disappearance of the purple colour as the reaction proceeds can be monitored by measuring how the absorbance of light by the mixture changes using a colorimeter.

The student mixes 5 cm^3 of solution 6 with 5 cm^3 of NaOH(aq), a large excess, and immediately starts the stopwatch.

The resulting mixture is then placed in a colorimeter. The absorbance of this mixture is measured every 100 seconds after starting the stop-watch.

Fig. 2.3 shows a graph of the student's results.

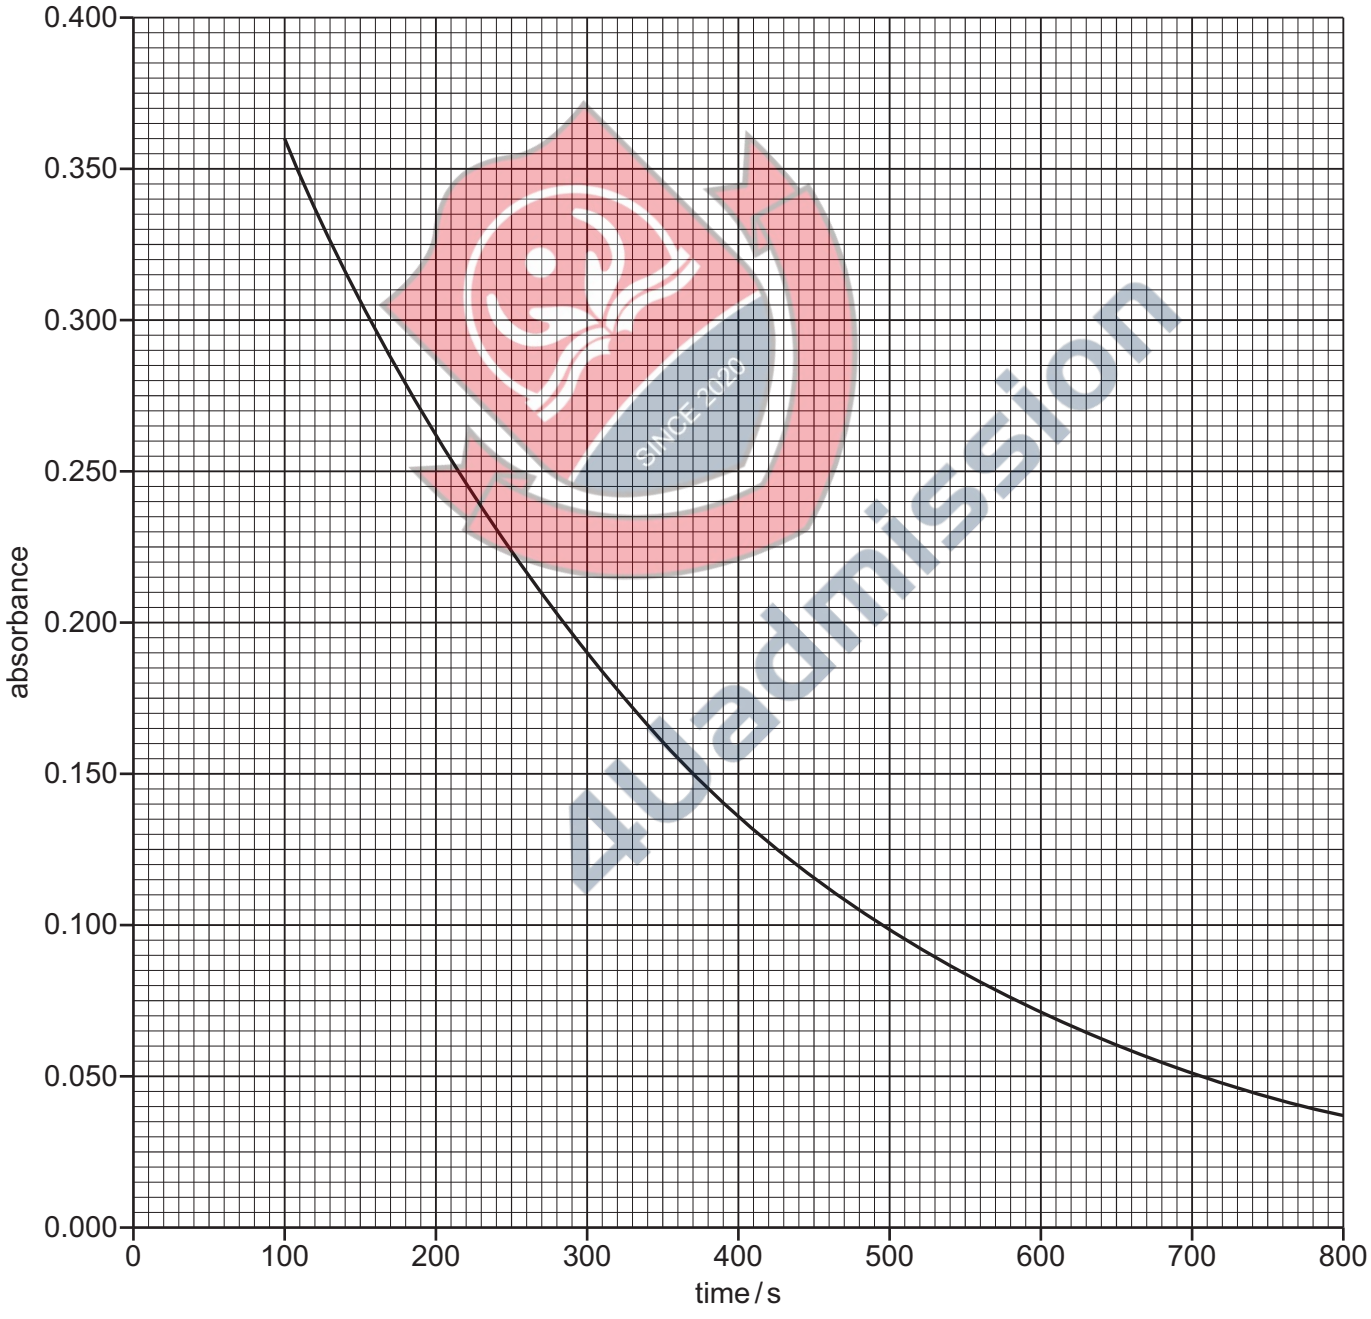

Fig. 2.3

(i) Suggest why it is **not** possible for the student to measure the absorbance of the mixture at t = 0 s.

.....

..... [1]

(ii) Use the graph in Fig. 2.3 to find the half-life, $t_{\frac{1}{2}}$, starting at 100 s.

State the coordinates of both points on the line of best fit used in your calculation.

coordinates 1 ..... coordinates 2 .....

half-life ..... s
[2]

(iii) Another student repeats the experiment at a different temperature and measures two half-life values. The values obtained are 420 s and 425 s.

Use these values to deduce the order of the reaction with respect to $C_{25}H_{30}N_3C\ell(aq)$. Explain your answer.

order = ...

explanation .....
